

16. Deliverables

16.1 Overview

Deliverables are the final outputs produced during the completion of the API Testing project. These artifacts serve as evidence of the testing activities performed and demonstrate the successful execution of the project.

For the **ReqRes API Testing Using Postman Project**, several deliverables were prepared, including Postman collections, environment files, execution reports, screenshots, and project documentation.

These deliverables can be submitted as part of an internship project, academic project, portfolio project, or professional API testing assignment.

16.2 Postman Collection JSON

Description

The Postman Collection JSON file contains all API requests, folders, test scripts, validations, and configurations used during testing.

This collection serves as the primary automation asset of the project.

Contents

The collection includes:

```
ReqRes API Testing
├── Authentication
│   └── Login
├── Users
│   ├── Get Users
│   └── Get Single User
├── Create User
│   └── Create User
├── Update User
│   ├── PUT Update User
│   └── PATCH Update User
└── Delete User
    └── Delete User
```

File Name

ReqRes_API_Testing.postman_collection.json

Purpose

- Stores all API requests
 - Stores validation scripts
 - Enables collection sharing
 - Supports Newman execution
 - Provides reusable test assets
-

16.3 Environment JSON

Description

The Environment JSON file contains environment variables used throughout the project.

This helps avoid hardcoded values and improves maintainability.

Variables Included

Variable Name	Value
base_url	https://reqres.in/api

File Name

ReqRes_Environment.postman_environment.json

Purpose

- Manage environment variables
 - Enable reusable configurations
 - Support Collection Runner execution
 - Support Newman execution
-

16.4 Newman Execution Result

Description

Newman was used to execute the Postman collection from the command line.

The generated execution result serves as proof of successful automation execution.

Contents

The Newman output contains:

- Number of requests executed
 - Number of assertions executed
 - Passed tests
 - Failed tests
 - Execution duration
-

Sample Output

```
Iterations : 1
Requests   : 7
Assertions : 20
```

```
Passed      : 20
Failed      : 0
```

Generated Files

`newman-report.html`

or

`newman-result.txt`

Purpose

- Evidence of automated execution
 - Test result documentation
 - CI/CD compatibility demonstration
-

16.5 Screenshots

Description

Screenshots were captured during API execution to provide visual proof of testing activities.

Screenshots Included

Login API Execution

Login_API_Execution.png

Shows:

- Request Body
 - Response Body
 - Status Code
 - Test Results
-

Get Users API Execution

Get_Users_API.png

Shows:

- User list retrieval
 - Response validation
-

Get Single User API Execution

Get_Single_User_API.png

Shows:

- Specific user details
 - Successful response
-

Create User API Execution

Create_User_API.png

Shows:

- User creation request
 - Generated ID
 - Created timestamp
-

PUT Update User API Execution

PUT_Update_User_API.png

Shows:

- Full user update
 - Updated response
-

PATCH Update User API Execution

PATCH_Update_User_API.png

Shows:

- Partial update request
 - Updated fields
-

Delete User API Execution

Delete_User_API.png

Shows:

- Status Code 204
 - Successful deletion
-

Collection Runner Result

Collection_Runner_Result.png

Shows:

- Total requests
- Passed tests
- Failed tests

Newman Execution Result

Newman_Execution_Result.png

Shows:

- Command execution
 - Newman summary report
-

Purpose

- Visual evidence of testing
 - Project documentation support
 - Internship submission requirement
-

16.6 API Test Report

Description

The API Test Report is the main project document that summarizes all testing activities, execution results, observations, and conclusions.

Contents of Report

Project Information

- Project Title
- Objective
- Scope

Testing Details

- Tools Used
- APIs Tested
- Test Environment

Execution Details

- Test Scenarios

- Test Cases
- Validation Methods

Results

- Execution Summary
- Observations
- Challenges
- Resolution

Conclusion

- Final Project Outcome

File Name

ReqRes_API_Test_Report.pdf

or

ReqRes_API_Test_Report.docx

Purpose

- Official project documentation
 - Audit trail of testing activities
 - Internship/project submission artifact
-

16.7 Deliverables Summary Table

Deliverable	File Name
Postman Collection	ReqRes_API_Testing.postman_collection.json
Environment File	ReqRes_Environment.postman_environment.json
Newman Report	newman-report.html
Execution Screenshots	PNG/JPG Files
API Test Report	ReqRes_API_Test_Report.pdf

16.8 Submission Package Structure

```
TASK-2_ReqRes_API_Testing_Postman_Project
├── Postman_Collection
│   └── ReqRes_API_Testing.postman_collection.json
├── Environment
│   └── ReqRes_Environment.postman_environment.json
├── Newman_Report
│   └── newman-report.html
├── Screenshots
│   ├── Login_API_Execution.png
│   ├── Get_Users_API.png
│   ├── Get_Single_User_API.png
│   ├── Create_User_API.png
│   ├── PUT_Update_User_API.png
│   ├── PATCH_Update_User_API.png
│   ├── Delete_User_API.png
│   ├── Collection_Runner_Result.png
│   └── Newman_Execution_Result.png
└── Documentation
    └── ReqRes_API_Test_Report.pdf
```

16.9 Conclusion

The deliverables prepared for this project provide complete evidence of the API testing activities performed using Postman and Newman. They include the collection files, environment configuration, execution reports, screenshots, and detailed documentation.

These deliverables ensure that the project is fully documented, reproducible, and ready for internship, academic, or professional submission purposes.
