

17. Test Closure Report

17.1 Overview

The Test Closure Report is the final document prepared at the end of the testing lifecycle. It summarizes all testing activities, execution results, deliverables, observations, challenges, and final outcomes of the project.

The purpose of the Test Closure Report is to formally conclude the testing process and provide stakeholders with a comprehensive summary of the work completed.

In this project, the Test Closure Report documents the successful completion of API testing activities performed on the ReqRes REST APIs using Postman and Newman.

17.2 Project Information

Item	Details
Project Name	ReqRes API Testing Using Postman
Project Type	API Testing Project
Testing Tool	Postman
Automation Tool	Newman
API Platform	ReqRes REST API
Test Execution Type	Manual and Automated
Report Prepared By	QA Tester
Project Status	Completed

17.3 Testing Objective

The objective of this project was to verify the functionality, reliability, and response behavior of ReqRes API endpoints through manual and automated API testing.

The testing focused on:

- Authentication functionality
- User data retrieval
- User creation
- User update
- User deletion
- Response validation
- Error handling verification
- Performance validation

All planned objectives were successfully achieved during project execution.

17.4 Scope of Testing Completed

The following API functionalities were tested:

Authentication Testing

- Login API

User Retrieval Testing

- Get Users API
- Get Single User API

User Management Testing

- Create User API
- PUT Update User API
- PATCH Update User API
- Delete User API

Validation Testing

- Status Code Validation
- Response Body Validation
- Response Time Validation
- JSON Schema Validation

Negative Testing

- Invalid User Request Testing

17.5 Test Execution Summary

The complete test suite was executed successfully using:

Postman Collection Runner

and

Newman Command Line Execution

Execution Statistics

Metric	Result
Total APIs Tested	7
Total Requests Executed	7
Total Assertions Executed	20
Passed Assertions	20
Failed Assertions	0
Success Rate	100%

Execution Result

Total APIs Tested : 7
Passed : 7
Failed : 0

Success Rate : 100%

17.6 API-Wise Test Results

API Name	Method	Result
Login API	POST	Passed
Get Users API	GET	Passed
Get Single User API	GET	Passed
Create User API	POST	Passed
PUT Update User API	PUT	Passed
PATCH Update User API	PATCH	Passed
Delete User API	DELETE	Passed

Observation

All APIs returned expected responses and status codes.

No functional failures were observed.

17.7 Validation Summary

The following validations were performed successfully:

Validation Type	Status
-----------------	--------

Status Code Validation	Passed
Response Body Validation	Passed
Response Time Validation	Passed
JSON Schema Validation	Passed
Negative Testing Validation	Passed

Observation

All validation scripts executed successfully without any assertion failures.

17.8 Defect Summary

Defects Identified

During testing, no defects were identified within the ReqRes APIs.

Defect Statistics

Category	Count
Critical Defects	0
High Severity Defects	0
Medium Severity Defects	0
Low Severity Defects	0
Total Defects	0

Observation

All API endpoints behaved according to the expected functionality defined in the API documentation.

17.9 Challenges Encountered

The following challenges were encountered during project execution:

Base URL Configuration Issue

Issue:

Incorrect API URL configuration.

Resolution:

Configured and used `{{base_url}}` environment variable.

Environment Variable Issue

Issue:

Environment variables were not resolving correctly.

Resolution:

Selected the correct environment and verified variable names.

Newman Execution Issue

Issue:

Newman command was not recognized.

Resolution:

Installed Node.js and Newman properly and verified system configuration.

17.10 Deliverables Submitted

The following project deliverables were successfully prepared:

Deliverable	Status
Postman Collection JSON	Completed
Environment JSON	Completed
Newman Report	Completed
Execution Screenshots	Completed
API Test Report	Completed
Test Closure Report	Completed

17.11 Lessons Learned

The project provided valuable practical experience in API testing and automation.

Key Learnings

- Understanding REST API architecture
- Working with HTTP methods
- Postman Collection creation
- Environment configuration
- API validation scripting
- Collection Runner execution

- Newman automation execution
- Test reporting and documentation

These skills are directly applicable to real-world software testing projects.

17.12 Project Outcome

The project successfully demonstrated end-to-end API testing using industry-standard tools.

Achievements

- ✓ Successful API validation
 - ✓ Successful automation execution
 - ✓ Successful report generation
 - ✓ Successful project documentation
 - ✓ Successful completion of all planned testing activities
-

17.13 Test Closure Decision

Based on the successful completion of all planned testing activities and the absence of critical defects, the testing phase is formally closed.

Closure Status

Testing Status : CLOSED

Project Status : SUCCESSFULLY COMPLETED

Release Recommendation : APPROVED

17.14 Final Closure Statement

The **ReqRes API Testing Using Postman Project** has been successfully completed. All planned API test cases were executed, validations were performed, automation was implemented using Newman, and results were documented appropriately.

No critical issues were identified during testing, and all APIs demonstrated expected behavior. The project achieved a 100% execution success rate and fulfilled all defined objectives.

Therefore, the testing activity is formally closed, and the project is considered successfully completed and ready for submission.

Final Project Statistics

Parameter	Result
Total APIs Tested	7
Total APIs Passed	7
Total APIs Failed	0
Total Assertions Passed	20
Total Assertions Failed	0
Success Rate	100%
Project Status	Completed
Test Status	Closed
